London, UK | Available for Full Time start from June 2026 | right to work in the UK - UK citizen

PROFESSIONAL SUMMARY

Stack agnostic Software Engineering student (graduating June 2026) aiming for a graduate position in a product focused setting. Skilled at rapidly building and iterating on scalable systems within JavaScript, Python, and Java ecosystems. Motivated by using AI powered tools to speed up development workflows, producing clean, handoff ready code, and delivering tangible, data backed business results.

EDUCATION

Kingston University

London, UK

Bachelor of Science in Computer Science (Predicted 2:1)

SEP.2022 – SEP.2026

– *Relevant Coursework:* Data Structures & Algorithms, Java/Python, Neural Networks, UI/UX Design.

EXPERIENCE

Extern

Remote

Data Analyst Externship(Beats by Dre)

MAY.2025 – AUG.2025

- Analyzed datasets of over 100+ consumers using **Python (Pandas/Matplotlib)** and Excel to identify trends in brand perception and satisfaction.
- Discovered a key market insight revealing that **60% of surveyed customers** were unaware of the brand's subsidiary relationship with Apple, influencing marketing strategies.
- Presented data driven visualizations and strategic recommendations to the leadership team via interactive dashboards.

USP College

Basildon, UK

Freelance Web Developer

SEP.2021 – APR.2022

- Delivered a 68% increase in sales traffic for a local client by rebuilding their e-commerce architecture on WordPress and integrating the Stripe API for secure payments.
- Implemented **SEO best practices** and image compression techniques, significantly improving site load times and organic search rankings.

PROJECTS

African Cuts (Acutz) | *React Native, Appwrite, Node.js,*

SEP.2025 – APR.2026

- **Database Optimization:** Designed a highly scalable NoSQL data layer, utilizing strategic denormalisation to eliminate costly client-side SQL-style joins, guaranteeing O(1), enhancing data retrieval speed by 40%.
- **Advanced Problem Solving:** Identified a critical abstraction leak causing data corruption in the official Appwrite SDK; engineered a native HTTP fetch REST API bypass to securely manage multipart/form-data cloud storage uploads.
- **Code Maintainability:** Enforced strict Separation of Concerns (SoC) and DRY principles by abstracting complex asynchronous database mutations and hardware GPS integrations into polymorphic React Custom Hooks.

Simplify My Car | *Python, Flask, Poetry, DVLA API*

MAR.2024 – JUL.2024

- Mentored by a Software Engineer at PwC, implementing **industry standard Git branching strategies**, pull request workflows, and **software development life cycles (SDLC)**.
- Developed a Python/Flask web application that fetches/parses real time data from the **DVLA API** to deliver complete vehicle health reports in a user friendly dashboard,optimizing queries, reducing response time by 55%.
- Explored AWS fundamentals including IAM roles and permission management

Tempest | *Security Expert, Agile Team Project*

JAN.2026 – APR.2026

- **Security Architecture & Threat Modeling:** Conducted comprehensive threat modeling to identify internal and external system risks, establishing core mitigation strategies including strict input sanitation to prevent malicious file execution and enforcing the principle of least privilege for the code scanner.
- **Vulnerability Detection Engine:** Designed the core security scanner logic by defining regex and pattern matching rules to automatically detect high priority vulnerabilities, such as SQL injection patterns, hard coded API secrets, and deprecated cryptography functions, automatically detecting 95% of high-priority vulnerabilities.
- **System Design & Metrics:** Collaborated within an 8 person team using XP principles to architect a layered system (Input, Processing, Data/Logic, Presentation). Directly defined the high risk thresholds for the platform's Technical Debt Index (TDI), lowering deployment failure rate from 15% to 2%

TECHNICAL SKILLS

Languages: Java, Python, SQL, C#, JavaScript, HTML/CSS

Technologies: React Native, Node.js, Flask, Appwrite, Firebase, Git, Poetry, WordPress

Concepts: API Development (REST), Database Schema Design, CI/CD Principles, SEO, AI Assisted Development, Agile/Scrum.
